

Dashboards Overview

Overview

3 custom Lovelace dashboards are configured in Home Assistant (storage mode), plus the default Lovelace dashboard. All use the storage-mode editor (not YAML mode).

Dashboard Inventory

Title	URL Path	Icon	Admin Only	Mode
Home View	/home-view	mdi:home	Yes	storage
Map	/map	mdi:map	No	storage
Plants	/plant-care	mdi:flower	No	storage

Home View

URL: /home-view | **Admin only:** yes | **Icon:** mdi:home

The primary home control dashboard. Restricted to admin users.

Likely content (inferred from devices):

- Room-by-room light and switch controls
- Climate/thermostat control (ecobee)
- Media player controls (Samsung TV, soundbars)
- Security camera feeds (go2rtc WebRTC)
- Cover/blind controls
- Lock status
- Presence indicators (Rajeev Iyer)
- Energy monitoring tiles
- UPS status

HACS cards likely used:

- Bubble Card (Clooos) — modern room/device cards
 - Slider Button Card — dimmer controls
 - Comfortable Environment Card — climate display
 - Keep Texts in Tabs — tab navigation
 - Energy Sankey Card — energy flow visualization
 - TrashCard — garbage collection schedule
-

Map

URL: `/map` | **Admin only:** no | **Icon:** `mdi:map`

Standard HA map dashboard showing:

- Person/device tracker locations
 - Configured zones (Home, Work, Rajeeta Home)
 - Device tracker entities for mobile devices and vehicle telematics
-

Plants

URL: `/plant-care` | **Admin only:** no | **Icon:** `mdi:flower`

Dedicated plant care dashboard using data from:

- Third Reality soil moisture sensors (Gen1 + Gen2, via Zigbee2MQTT + ZHA)
- Irrigation watering history helpers (`input_datetime.*_last_watered`, `input_number.*_last_run_duration`)
- Orbit BHyve zone status

Likely content:

- Per-plant moisture level gauges
 - Last watered date/time
 - Last run duration
 - BHyve next watering schedule
 - Zone valve status
-

Default Dashboard

The built-in default Lovelace dashboard (auto-generated) also exists at `/lovelace` but is not listed as a custom storage-mode dashboard — it uses HA's auto-entities feature.

Frontend Customizations (HACS Plugins)

These HACS plugins extend dashboard capabilities:

Plugin	Author	Use
Bubble Card	Cloos	Modern pop-up room/device cards
Slider Button Card	custom-cards	Dimmer/fan slider controls
Comfortable Environment Card	argaar	Temperature + humidity comfort display
Keep Texts in Tabs	elchininet	Tab labels in card navigation
Weather Chart Card	mlamberts78	Multi-day weather forecast chart
Energy Sankey Card	davet2001	Energy flow Sankey diagram
Zigbee2mqtt Networkmap Card	azuwis	Zigbee mesh network topology map
TrashCard	idaho	Garbage collection schedule card

Notes / Gotchas

- The Home View dashboard is admin-only — non-admin Lovelace users will not see it in the sidebar.
- WebRTC camera cards (using the WebRTC Camera HACS integration by AlexxIT) provide low-latency live views; they require go2rtc to be running.
- The Plants dashboard data is only as accurate as the automation-populated helpers — if an irrigation cycle is manually interrupted before completion, the last run duration may be incorrect.
- Weather Chart Card uses the Met.no `Forecast Home` weather entity.
